

How to...Grow Carrots

You'll Need : Peat Free Compost, Containers - can reuse pots, Plastic Tray - with no holes in the bottom, Cardboard Tubes, Seeds, Water and Labels.

1 Collect your equipment - compost, seeds & containers.

2 Cut your cardboard tubes to fit into your container. Fill $\frac{3}{4}$ with compost.

3 Take a pinch of seeds and sprinkle a couple into each tube.

4 Cover each tube with a little more compost and give them a good watering.

5 Pop the container into a plastic tray with no holes. Label your container with name and date.

6 Place container and tray on a warm windowsill. Give a little water in the tray when needed.

7 Seedlings will appear 2-3 weeks. When strong enough transfer to bigger pots.

8 Spread them out - make sure your soil is stone/lump free. Place in a sunny spot.

9 Ready to harvest after 14 weeks as baby carrots or leave to grow bigger.
