

Retinal Screening – what happens at my appointment?

Please tell us your date of birth

Telephone number

Address

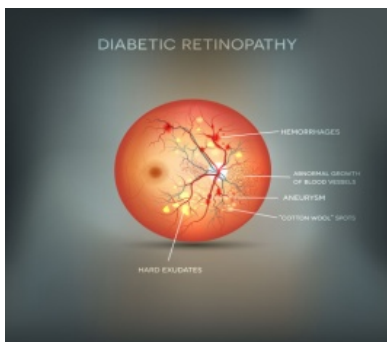

We will ask you to read the eye chart with one eye covered. This will be for both eyes.

You will then sit at the camera and place your chin in the rest and look at the light.

This machine photographs your eye.

The picture will look similar to this

We may need to put drops in your eye to make your pupils bigger so that we can take a clear photograph.

They take 20 minutes to start working.

You will not be able to drive home.

We will send you a letter detailing your results within 4 weeks

We will also send a copy to your GP.
