

How to...Grow Leeks

You'll Need : Peat Free Compost, Containers - can reuse pots,

Plastic Tray - with no holes in the bottom,

Seeds, Water and Labels.

1 You will need seeds, compost, container, plastic tray, labels and water.

2 Make sure there are holes in the bottom of the container and half fill with compost.

3 Take a pinch of seeds and sprinkle on top of compost. Cover with more compost.

4 Water the top until water runs out of the bottom. Label the container with date & produce.

5 Place container into a tray and put on warm windowsill away from direct sunlight.

6 Regular small amounts of water given from below, helps to build strong roots.

7 When 6cm in height you can transfer to outside pots or beds.

8 Give them plenty of space to grow. Continue to water during dry spells.

9 Ready to harvest: September right through to Spring.
